

Application No. 10/687,728
Atty. Docket No. P3108
February 7, 2006
Page 2 of 15

1. (Currently Amended) A system for providing communication device location information, comprising:

a first communication device;

a second communication device;

~~a location service center node;~~

a communication network ~~interconnected to~~ configured to interconnect said first communication device, and said second communication device; ~~and, and said location service center node, wherein~~

a location service center node connected to said communication network and configured to receive a request for location related information ~~received~~ from a first requesting one of said first and second communication devices regarding ~~a second~~ either one of said first and second communication devices is ~~validated~~, configured to validate that said request is permissible and configured to deliver said location related information to said requesting one of said first and second communication devices.

2. (Currently Amended) The system of Claim 1, wherein said ~~validated~~ validation request is made by a subscriber to a location determining service.

3. (Currently Amended) The system of Claim 1, wherein said ~~validated~~ validation request is made by a network node.

*Application No. 10/687,728
Atty. Docket No. P3108
February 7, 2006

4. (Currently Amended) The system of Claim 1, wherein said communication network comprises a plurality of communication networks.

5. (Currently Amended) The system of Claim 4, wherein said first communication device is associated with a first network and said second one of said first and second communication devices is associated with any one of ~~at least first and second~~ said plurality of communication networks.

6. (Currently Amended) The system of Claim 1, wherein said location service center node is in communication with a location determining entity separate from said first and second communication devices.

7. (Original) The system of Claim 1, wherein said second one of said first and second communication devices comprises a wireless telephone.

8. (Currently Amended) A location service network node, comprising:
data storage, operable to store at least one of data and application programming;
a processor, operable to execute application programming;
a first communication interface, operable to interconnect said node to a communication network and operable to send and receive location information, wherein location information regarding a first communication device is received from a network entity in a communication network, and wherein location related information regarding said first communication device is directed to a second communication device.

Application No. 10/687,728
Atty. Docket No. P3108
February 7, 2006
Page 4 of 15

9. (Original) The location service network node of claim 8, wherein said location related information comprises said location information.

10. (Original) The location service network node of claim 8, wherein said location information indicates a location of said first communication device in a first format, and wherein said location related information indicates a location of said first communication device in a second format.

11. (Currently Amended) A method for obtaining location related information, comprising:

initiating a request for location related information associated with ~~a first~~ one of a first communication device and a second communication device;

validating said request;

querying a location determining entity for location information;

providing at least one of said location information and said location related information to a one of said first communication device and said second communication device.

12. (Original) The method of Claim 11, wherein said at least one of said location information and said location related information is provided to a second one of said first communication device and said second communication device.

Application No. 10/687,728
Atty. Docket No. P3108
February 7, 2006
Page 5 of 15

13. (Original) The method of Claim 11, wherein said initiating a request comprises requesting a communication link between said first and second communication devices.

14. (Currently Amended) The method of Claim 11, wherein said querying a location determining entity comprises providing said location determining entity with information identifying said ~~first~~ one of said first communication device and said second communication device.

15. (Currently Amended) The method of claim 14, wherein said identifying information ~~identifying~~ comprises at least one of a telephone number, an Internet protocol address, and an equipment identification number associated with said ~~first~~ one of a first communication device and a second communication device.

16. (Currently Amended) The method of Claim 11, wherein said initiating a request comprises ~~using~~ operating said second one of said first communication device and said second communication device to contact said location determining entity.

17. (Currently Amended) The method of Claim 11, wherein said first communication device is comprises a calling communication device.

18. (Currently Amended) The method of Claim 11, wherein said first communication device is comprises a called communication device.

Application No. 10/687,728
Atty. Docket No. P3108
February 7, 2006

19. (Original) The method of Claim 11, wherein said validating said request is performed in connection with a location service center.

20. (Original) The method of Claim 11, wherein said location related information comprises at least one of a cell site location, a cell site identifier, a latitude and longitude, and a UTM coordinate.

21. (Original) The method of Claim 11, further comprising:
receiving said location information at a location service center;
generating said location related information from said received location information, wherein said location related information is provided to said communication device initiating said request for said location related information.

22. (Original) The method of Claim 21, wherein said location related information comprises said location information.

23. (Original) The method of Claim 21, wherein said location related information comprises at least one of a latitude and longitude, and UTM coordinate, a cell site location, a cell site identifier, a place name, a street address, weather conditions and a map.

24. (Original) The method of Claim 11, wherein said location information is delivered over a first communication network.

*Application No. 10/687,728
Atty. Docket No. P3108
February 7, 2006
Page 7 of 15*

25. (Original) The method of Claim 24, further comprising:
establishing a communication link between said first and second communication devices over a second communication network.
26. (Original) The method of Claim 11, wherein each request for location related information is initiated by a subscriber to a location determining service, and wherein said subscriber is associated with said first one of a first communication device and a second communication device.
27. (Original) The method of Claim 26, wherein said step of validating said request comprises verifying that an account of said subscriber is in good standing.
28. (Original) The method of Claim 11, further comprising communicating said at least one of said location information and said location related information to a user of said second one of said first communication device and said second communication device.
29. (Original) The method of claim 28, wherein said providing at least one of said location information and said location related information to said second one of said first communication device and said second communication device is authorized by a user of said first one of said first communication device and said second communication device.
30. (Original) The method of claim 28, wherein said communicating comprises displaying.

*Application No. 10/687,728
Atty. Docket No. P3108

31. (Original) The method of claim 28, wherein said communicating comprises providing a verbalization.

Cancel Claims 32 – 45.

46. (Currently Amended) A system for providing location related information associated with a mobile communication device, comprising:

means for determining a location of a first communication device; comprising at least one element on a communication network;

means for querying said means for determining a location for a location of said first communication device; and

means for validating a request for location related information associated with said first communication device.

47. (Original) The system of Claim 46, further comprising means for communicating said location related information to a requester.

48. (Original) The system of Claim 47, wherein said means for communicating comprises a second communication device.

49. (Original) The system of Claim 48, wherein said second communication device comprises wireless communication means.

50. (New) A method for providing location caller identification information comprising:

initiating a call from a first communication device to a second communication device through a communication network;

determining a location of said first communication device by a location service network node in communication with said communication network responsive to said initiating; and

delivering a call set up signal to said second communication device, said call set up signal including the location of the first communication device.

51. (New) A method in accordance with claim 50 further including:

verifying that said second communication device is authorized to receive the location of the first communication device.

52. (New) A method in accordance with claim 50 further comprising:

determining a location of said second communication device at a location service network node responsive to said initiating; and

delivering the location of the second communication device to the first communication device.

53. (New) A method in accordance with claim 52 further comprising:

verifying that said first communication device is authorized to receive the location of the second communication device.

54. (New) A method in accordance with claim 50 wherein determining a location of said first communication device comprises:

contacting a location determining entity associated with said communication network.

Application No. 10/687,728
Atty. Docket No. P3108
February 7, 2006
Page 10 of 15

55. (New) A method in accordance with claim 54 wherein determining a location of said first communication device comprises:

contacting a plurality of location determining entities.

56. (New) A method in accordance with claim 54 wherein determining a location of said first communication device comprises:

contacting an automatic location information (ALI) database.

57. (New) A method in accordance with claim 54 wherein determining a location of said first communication device comprises:

contacting a mobile positioning center.

58. (New) A method in accordance with claim 54 wherein determining a location of said first communication device comprises:

contacting a VoIP positioning center.

59. (New) A method in accordance with claim 54 wherein determining a location of said first communication device comprising:

determining the location of the first communication device at the time the call is initiated.

60. (New) A method in accordance with claim 50 wherein said communication network comprises a plurality of communication networks and wherein said first communication device and said location service node are in communication with a first of said plurality of communication networks and said second communication device is in communication with a second of said plurality of communication networks, the method further comprising:
